Contents of Volume 103

Number 1, 7 July 1983

NINIO, J., The Brain as a Geometer 1

BURDETT, I. D. J. and KIRKWOOD, T. B. L., How Does a Bacterium Grow During its Cell Cycle? 11

MCGRAW, J. B. and WULFF, R. D., The Study of Plant Growth: A Link Between the Physiological Ecology and Population Biology of Plants 21

RAUDINO, A., ASERO, A. and RIZZA, V., A Theoretical Model for Surface Polarizability in Phospholipid Membranes . . . 29

HOFFMAN, A. and TEPPER, E. L., Energy Storage in Photosynthetic Photophosphorylation: Lessons from the Physical Chemistry of the Photographic Latent Image 43

KATSURA, I., Theory on the Structure and Stability of Coated Vesicles 63

FREHLAND, E. and STEPHAN, W., Rate Theory Models for Ion Transport through Rigid Pores. I. Time-Dependent Analysis in the Case of Vanishing Interactions 77

ESHEL, I., Evolutionary and Continuous Stability 99

PHAM DINH, T., BACONNIER, P., DEMONGEOT, J. and BENCHETRIT, G., Simulation of a Biological Oscillator: The Respiratory System 113

DAVIS, P. J. and OSAWA, Y., Binding of Thyroid Hormone by Heme Proteins may Signal Protein Age 133

GERO, A., Desensitization, Two-state Receptors and Pharmacological Parameters 137

LETTERS TO THE EDITOR

DE LONG, R., A Unified Concept for Microbial Genetics . 163

ECONOMOS, A. C., Elastic and/or Geometric Similarity in Mammalian Design? 167

Number 2, 21 July 1983

SORARRAIN, O. M., BOGGIO, R. R., POUSA, J. L. and FAVRET, E. A., Application of Absorbent Markov Chains for a Selfing Model of Two Independent Logi 173

ROTENBERG, M., Transport Theory for Growing Cell Populations . 181

MARZEC, C. and KAPPRAFF, J., Properties of Maximal Spacing on a Circle Related to Phyllotaxis and to the Golden Mean . . 201

KURGANOV, B. I., Specific Ligand-induced Association of an Enzyme. A New Model of Dissociating Allosteric Enzyme . . . 227

GOLDSTEIN, B. N., Analysis of Cyclic Enzyme Reaction Schemes by the Graph-theoretic Method 247

SILVESTER, N. R., Some Hydrodynamic Aspects of Filter Feeding with Rectangular-Mesh Nets 265

CRAIG, R., Familial Selection and the Evolution of Social Behaviour Re-examined 287

WASER, M. R., GARFINKEL, L., KOHN, M. C. and GARFINKEL, D., Computer Modeling of Muscle Phosphofructokinase Kinetics . 295

TYSON, J. J., Periodic Enzyme Synthesis and Oscillatory Repression: Why is the Period of Oscillation Close to the Cell Cycle Time? . 313

LETTERS TO THE EDITOR

HOLLIDAY, R. and KIRKWOOD, T. B. L., Theories of Cell Ageing: A Case of Mistaken Identity 329

SEPULVEDA, A., PIEBER, M., SOTO, M. A. and TOHÀ, J. C., Storage and Retrieval of Biomolecule Sequences . . 331

Index to Volume 103

Action potentials, plant, the evolution of (letter), 645
Ageing of cells: a case of mistaken identity (letter), 329
ÁNGYÁN, J. and NÁRAY-SZABÓ, G., Comparison of protein electrostatic potential along the catalytic triad of serine proteinases, 349
ANNINOS, P., ZENONE, S. and ELUL, R., Artificial neural nets: dependence of the EEG amplitude's probability distribution on statistical parameters, 339
Artificial neural nets: dependence of the EEG amplitude's probability distribution on statistical parameters, 339
ASERO, A. (see RAUDINO, A.), 29
Association, ligand-induced, specific, of an enzyme. A new model of dissociating allosteric enzyme, 227
ATLAN, H. (see MILGRAM, M.), 523
Automata, probabilistic, as a model for epigenesis of cellular networks, 523

BACONNIER, P. (see PHAM DINH, T.), 113
Bacterium, how does it grow during its cell cycle?, 11
BENCHETRIT, G. (see PHAM DINH, T.), 113
BEN-HUR, T. (see HOROVITZ, A.), 609
Binding of thyroid hormone by heme proteins may signal protein age, 133
Biomolecule sequences, storage and retrieval of (letter), 331
BOGGIO, R. R. (see SORARRAIN, D. M.), 173
BOWLES, M. A. (see MATELA, R. J.), 357
Brain as a geometer, 1
BURDETT, I. D. J. and KIRKWOOD, T. B. L., How does a bacterium grow during its cell cycle?, 11

Cancer basic protein: a cellular growth factor in cancer cells?, 473
Cardiac pacemakers, difference equation model of ventricular parasystole as an interaction between, based on the phase response curve, 439
Catalytic triad of serine proteinases, comparison of protein electrostatic potential along, 349
Cell ageing theories: a case of mistaken identity (letter), 329
Cell cycle, how does a bacterium grow during?, 11
Cell cycle time, why is it close to the period of oscillation? Periodic enzyme synthesis and oscillatory repression, 313
Cell debris in pulse-cytophotometry: a probability theoretic model, 581
Cell populations, growing, transport theory for, 181
Cellular growth factor in cancer cells?; cancer basic protein, 473
Cellular networks, probabilistic automata as a model for epigenesis of, 523
Centripetal degeneracy of distinctive field values, a plausible molecular interpretation of the polar coordinate model with, 421
Chromatin, zigzag, topology of, 601

Circle, properties of maximal spacing on; relation to phyllotaxis and to the golden mean, 201
Clathrin lattice transformations in the coated vesicle pathway, model for, 405
Coated vesicle pathway, model for transformations of the clathrin lattice in, 405
Coated vesicles, theory on the structure and stability of, 63
Compartment maintenance in the *Drosophila* wing imaginal disc, computer simulation of, 357
Computer modeling of muscle phosphofructokinase kinetics, 295
Computer simulation of compartment maintainance in the *Drosophila* wing imaginal disc, 357
CRAIG, R., Familial selection and the evolution of social behaviour re-examined, 287
Crime, a model for the kinetics of, 609
Cyclic enzyme reaction schemes, analysis by the graph-theoretic method, 247

DAVIS, P. J. and OSAWA, Y., Binding of thyroid hormone by heme proteins may signal protein age, 133
DAY, W. H. E., Computationally difficult parsimony problems in phylogenetic systematics, 429
DE LONG, R., A unified concept for microbial genetics (letter), 163
DEMETRIUS, L., Selection and evolution in macromolecular systems, 619
DEMONGEOT, J. (see PHAM DINH, T.), 113
Dendritic spines, theoretical study on electrical properties of, 507
Desensitization, two-state receptors and pharmacological parameters, 137
Design, mammalian, elastic and/or geometric similarity in, 167
Difference equation model of ventricular parasystole as an interaction between cardiac pacemakers based on the phase response curve, 439
Dissociating allosteric enzyme, a new model of; specific ligand-induced association of an enzyme, 227
Drosophila wing imaginal disc, computer simulation of compartment maintenance in, 357
Drug disposition curves, importance of tissue distribution in determination of (letter), 649

ECONOMOS, A. C., Elastic and/or geometric similarity in mammalian design? (letter), 167
EEG amplitude's probability distribution, dependence on statistical parameters; artificial neural nets, 339
Elastic and/or geometric similarity in mammalian design, 167
Electrical properties of dendritic spines, theoretical study on, 507
Electrostatic potential, protein, along the catalytic triad of serine proteinases, 349
ELUL, R. (see ANNINOS, P.), 339
Energy storage in photosynthetic photophosphorylation: lessons from the physical chemistry of the photographic latent image, 43
Enzyme reaction schemes, cyclic, analysis by the graph-theoretic method, 247
Enzyme, specific ligand-induced association of; a new model of dissociating allosteric enzyme, 227
Enzyme synthesis, periodic, and oscillatory repression: why is the period of oscillation close to the cell cycle time?, 313

Epigenesis of cellular networks, probabilistic automata as a model for, 523
ESHEL, I., Evolutionary and continuous stability, 99
Eukaryotic genome: model considerations, 379
Evolution of plant action potentials (letter), 645
Evolution and selection in macromolecular system, 619
Evolution of social behaviour, and familial selection; a re-examination, 287
Evolutionary and continuous stability, 99

Familial selection and the evolution of social behaviour re-examined, 287
FAVRET, E. A. (see SORARRAIN, O. M.), 173
Filter feeding with rectangular-mesh nets, some hydrodynamic aspects of, 265
FORD, P. M. (see FORSDYKE, D. R.), 467
FORSDYKE, D. R. and FORD, P. M., Rouleaux formation as a measure of the phase separating ability of plasma, 467
FREHLAND, E. and STEPHAN, W., Rate theory models for ion transport through rigid pores. I. Time-dependent analysis in the case of vanishing interactions, 77
FREHLAND, E. (see STEPHAN, W.), 481

GARFINKEL, D. (see WASER, M. R.), 295
GARFINKEL, L. (see WASER, M. R.), 295
Genetics, microbial, a unified concept for (letter), 163
Genome, eukaryotic, model considerations, 379
Geometer, the brain as a, 1
Geometric and elastic similarity in mammalian design, 167
GERO, A., Desensitization, two-state receptors and pharmacological parameters, 137
Golden mean, properties of maximal spacing on a circle related to phyllotaxis and to, 201
GOLDSTEIN, B. N., Analysis of cyclic enzyme reaction schemes by the graph-theoretic method, 247
GOLDSWORTHY, A., The evolution of plant action potentials (letter), 645
Graph-theoretic method, analysis of cyclic enzyme reaction schemes by, 247
Growing cell populations, transport theory for, 181
Growth factor, cellular, in cancer cells?; cancer basic protein, 473
Growth of plants: a link between the physiological ecology and population biology, 21

Heme protein binding of thyroid hormone may signal protein age, 133
Hemodynamic significance of metabolic turn-over rate, 333
HOFFMAN, A. and TEPPER, E. L., Energy storage in photosynthetic photosphorylation: lessons from the physical chemistry of the photographic latent image, 43
HOLLIDAY, R. and KIRKWOOD, T. B. L., Theories of cell ageing: a case of mistaken identity (letter), 329
HOROVITZ, A. and BEN-HUR, T., A model for the kinetic of crime, 609
Hydrodynamic aspects of filter feeding with rectangular-mesh nets, 265

IKEDA, N., YOSHIZAWA, S. and SATO, R., Difference equation model of ventricular parasystole as an interaction between cardiac pacemakers based on the phase response curve, 439

Ion transport through rigid pores, rate theory models for; time-dependent analysis in the case of vanishing interactions, 77
Ion transport through rigid pores, rate theory models for; time-dependent analysis of the single-file model with special reference to oscillatory behaviour, 481

KURGANOV, B. I., Specific ligand-induced association of an enzyme. A new model of dissociating allosteric enzyme, 227

LI, J. K.-J., Hemodynamic significance of metabolic turn-over rate, 333
Ligand-induced association, specific, of an enzyme. A new model of dissociating allosteric enzyme, 227
Linear versus non-linear modelling, a case study, 549
Logi, independent, two, application of absorbent Markov chains for a selfing model of, 173

MCGRAW, J. B. and WULFF, R. D., The study of plant growth: a link between the physiological ecology and population biology of plants, 21
MCKINLEY, D. N., Model for transformations of the clathrin lattice in the coated vesicle pathway, 405
Macromolecular systems, selection and evolution in, 619
Mammalian design, elastic and/or geometric similarity in, 167
Markov chains, absorbent, application for a selfing model of two independent logi, 173
MARZEC, C. and KAPPRAFF, J., Properties of maximal spacing on a circle related to phyllotaxis and to the golden mean, 201
MATELA, R. J., RANSOM, R. and BOWLES, M. A., Computer simulation of compartment maintenance in the *Drosophila* wing imaginal disc, 357
Maximal spacing properties on a circle related to phyllotaxis and to the golden mean, 201
Membranes, phospholipid, a theoretical model for surface polarizability in, 29
Metabolic turn-over rate, hemodynamic significance of, 333
Microbial genetics, a unified concept for (letter), 163
MILGRAM, M. and ATLAN, H., Probabilistic automata as a model for epigenesis of cellular networks, 523
Modelling, linear versus non-linear, a case study, 549
Molecular interpretation of the polar coordinate model with a centripetal degeneracy of distinctive field values, 421
Muscle phosphofructokinase kinetics, computer modeling of, 295

NÁRAY-SZABÓ, G. (see ÁNGYÁN, J.), 349
Nets, rectangular-mesh, some hydrodynamic aspects of filter feeding with, 269
Networks, cellular, probabilistic automata as a model for epigenesis of, 523

Neural nets, artificial: dependence of the EEG amplitude's probability distribution on statistical parameters, 339
NINIO, J., The brain as a geometer, 1

OSAWA, Y. (see DAVIS, P. J.), 133
Oscillator, biological, simulation of; the respiratory system, 113
Oscillatory behaviour, time-dependent analysis of single-file model for ion transport through rigid pores with special reference to, 481
Oscillatory repression, periodic enzyme synthesis and; why is the period of oscillation close to the cell cycle time?, 313

PARNAS, H. and SEGEL, L. A., A case study of linear versus non-linear modelling, 549
Parsimony problems, computationally difficult, in phylogenetic systematics, 429
Periodic enzyme synthesis and oscillatory repression: why is the period of oscillation close to the cell cycle time?, 313
PHAM DINH, T., BACONNIER, P., DEMONGEOT, J. and BENCHETRIT, G., Simulation of a biological oscillator: the respiratory system, 113
Pharmacological parameters, desensitization and two-state receptors, 137
Phase separating ability of plasma, rouleaux formation as a measure of, 467
Phosphofructokinase kinetics for muscle, computer modeling of, 295
Phospholipid membranes, a theoretical model for surface polarizability in, 29
Photographic latent image, physical chemistry of, and energy storage in photosynthetic photophosphorylation, 43
Photosynthetic photophosphorylation, energy storage in; lessons from the physical chemistry of the photographic latent image, 43
Phyllotaxis, properties of maximal spacing on a circle related to, 201
Phylogenetic systematics, computationally difficult parsimony problems in, 429
Physiological ecology and population biology of plants, a link between; study of plant growth, 21
PIEBER, M. (see SEPULVEDA, A.), 331
Plant action potentials, the evolution of (letter), 645
Plant growth: a link between the physiological ecology and population biology of plants, 21
Plasma, rouleaux formation as a measure of the phase separating ability of, 467
Polar coordinate model with a centripetal degeneracy of distinctive field values, a plausible molecular interpretation of, 421
Polarizability, surface, in phospholipid membranes, a theoretical model for, 29
Population biology and physiological ecology of plants, a link between; study of plant growth, 21
Pores, rigid, rate theory models for ion transport through; time-dependent analysis in the case of vanishing interactions, 77
Pores, rigid, rate theory model for ion transport through; time-dependent analysis of the single-file model with special reference to oscillatory behaviour, 481
POUSA, J. L. (see SORARRAIN, O. M.), 173
Probabilistic automata as a model for epigenesis of cellular networks, 523
Probability theoretical model for the problem of cell debris in pulse-cytophotometry, 581
Protein age may be signalled by binding of thyroid hormone by heme proteins, 133

Protein electrostatic potential along the catalytic triad of serine proteinases, 349
Pulse-cytophotometry, the problem of cell debris in; a probability theoretic model, 581
